## Orthodontic treatment cases W1a

**Space closure for missing incisor teeth:** This case has missing 12, 22, 35 45. The space was completely closed. A symmetric and acceptable result is usually possible though in this case there was also a significant asymmetry of the lower jaw. Space closure is especially suitable when the upper teeth are initially prominent compared to the lower teeth. This case illustrates an unfavourable gum condition immediately after removing the fixed braces.
