Orthodontic treatment cases W1a

Age Adolescent Problems Missing upper right second incisor. Deep overbite. Mild spacing. **Treatment** : The usual treatment alternatives include creating space for a dental implant to replace the missing tooth or extraction of the corresponding upper left second incisor and complete space closure to obtain symmetry. Instead the patient chose to have simple space closure to avoid the need for an implant replacement and did not want the corresponding tooth removed either. While the patient was happy enough with the dental appearance and short treatment duration, the cosmetic result is obviously compromised by lack of symmetry.
